Hiring Team
Waymark
23 Strathmore Rd.
Natick, MA 01760

Dear Hiring Team,

I am writing to express my strong interest in the Junior Software Engineer position within the Product Development Team at Waymark. Rather than simply matching a list of requirements, I am drawn to your team because I believe software is most powerful when it bridges the gap between complex systems and tangible human experiences. I am drawn to Waymark's mission of using technology to bridge gaps in care.

My journey as an engineer has been driven by a relentless curiosity about how systems work under the hood. I am a builder and a tinkerer at heart. During my time at RIT and as an active member of the Computer Science House, my passion has been managing complex shared infrastructure—administering OKD, Ceph, and S3 storage clusters. I believe that understanding systems at a low level, from container orchestration down to communication protocols, makes for better application architecture.

This builder mindset is what drives my personal projects. When I wanted to learn about real-time asynchronous pipelines, I built **PlayTracker**, a tool that uses FastAPI and Redis streams to parse Discord signals and validate trade execution. When I wanted to explore low-latency data strategies, I created **PreconLeague**, a web app where I designed custom PostgreSQL caching layers to achieve sub-millisecond querying. I don't just write code; I dig into the mechanics of data and systems to solve problems.

I am a U.S. citizen with valid work eligibility. I would welcome the opportunity to bring my backend skills, systems curiosity, and passion for building to the Waymark team. Thank you for your time and consideration.

Kind Regards,

Ata Noor
